1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a

1st strand cDNA was primed with a NotI-Oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
division of Invitrogen.
This sequence belongs to sequence cluster 7663.f

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster

1st strand cDNA was primed with a NotI-Oligo(dT) primer. Five prime
1st strand cDNA was digested with Not I and cloned
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Genoscope - Centre National de Sequencage
2 rue Gaston Cremteux, CP 5706 - 91057 EVRY cedex - FRANCE
Email: seqref@genoscope.cns.fr Web: www.genoscope.cns.fr
1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Homo sapiens

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The porK polynucleotides and protein may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate porK expression, such as lung and kidney tumours, leukemia and stomach adenocarcinoma. porK may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of porK by expressing inactive proteins or to supplement the patients own production of porK. The encoded porK may be used as an antigen in the production of porK expression and activity. The antibodies and activity. The anti-porK antibodies and antagonists may be used to down regulate expression and activity and as diagnostic agents for detecting the presence of porK in samples. The present sequence represents a cDNA encoding the human porK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 2674 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim

                                                                                            Ś
                                                                                                                                                                                                                             The invention relates to a newly isolated peptide sequence of a human CC kinase that is related to the proto-oncogene tyrosine kinase subfamily. CC The activity of the kinase of the invention may be described as, CC cytostatic, antiarteriosclerotic, antiinflammatory and antipsoriatic. CC Peptides of the invention are useful in assays to determine the biological activity of the protein, in drug screening assays, tissue CC typing and pharmacogenomic analysis. They are also useful in treating or CC diagnosing disorders characterised by an absence of, inappropriate, or CC unwanted expression of the protein, such as inflammation, cancer (e.g. CC leukaemia, lung tumours, kidney tumours or stomach adenocarcinoma), CC arteriosclerosis, and psoriasis. Nucleic acid molecules of the invention CC assays. The peptide and nucleic acid sequences are useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic targets, aid in the identification CC tissues that express the protein. The protein activity in cells and CC tissues that express the protein. The protein of the invention may also be useful in gene therapy. The gene encoding the protein may also CC be useful in gene therapy. The gene encoding the protein of the invention CC has been localised to human chromosome 15. The current sequence

The invention relates to a new isolated human proto-oncogene tyrosine kinase peptide or its allelic variant, orthologue or fragment. The peptide is useful for preparing a composition for treating a disease or condition mediated by a human kinase protein e.g. cancer. The present

The invention relates to a novel isolated polypeptide which is a human CC kinase and phosphatase (KPP). The polypeptide of the invention CC demonstrates cardiovascular, antiarteriosclerotic, hypotensive, CC vasotropic, antiinflammatory, antianginal, anti-HTV antiallergic, CC antiasthmatic, immunosuppressive, antithyroid, dermatological, neuroprotective, antiasthmatic, antiprotropic, antigout, gastrointestinal, neuroprotective, CC antidabetic, nephrotropic, antigout, gastrointestinal, neuroprotective, antiparatic, ophthalmological, antipsoriatic, controparatic, ophthalmological, antipsoriatic, antipsoriatic, antiparasitic, antipsoriatic, antiparasitic, antipsoriatic, cc antibacterial, virucide, protrozoacide and fungicide activities. The CC kinase and phosphatase (KPP) polynucleotides, polypeptides, agonists and cardiovascular diseases, immune system disorders, disorders affecting growth and development, cell protozoan or helminthic infections. Furthermore, the molecules of the CC invention may be useful for creating transgenic animals to model human CC disease and during gene therapy. The current sequence is that of a human cxx
                                                                                                                                                                                                                                                                                                                       Query Match

The polynucleotide sequences of the invention or a composition comprising these polynucleotides are useful as a high throughput method for detecting altered expression of one or more polynucleotides in a sample. The polynucleotides can be used in the diagnosis of disorders associated with foam cell development such as atherosclerosis, cerebral stroke, and cardiovascular disorders such as coronary artery disease. The polynucleotide sequences can also be used PCR primers and probes. The polynucleotides of the invention are also useful in gene therapy. ANS94746-ANS9521 represent the human polynucleotide sequences of the invention which are differentially expressed during foam cell differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Composition useful for diagnosis of conditions, disorders or diseases associated with atherosclerosis, comprises several polynucleotides that are differentially expressed in foam cell development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; foam cell differentiation; atherosclerosis; cerebral stroke; cardiovascular disorder; coronary artery disease; gene therapy; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAS95001

CC invention have cytostatic, antiarteriosclerotic, anti-HTV, antiallargic, concerns, neuroprotective, cerebroprotective, anti-HTV, antiallargic, concerns, and thyromimetic activities, and can be used in gene therapy. The human KPP proteins and polymucleotides can be used in the decreased human kPP proteins and polymucleotides can be used in concerns, atherosclerosis, neurological (e.g. atherosclerosis), neurological (e.g. AIDS, allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) confections. They can also be used in ascessing the effects of exogenous compounds on the expression of nucleic acid and amino acid compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                            New human kinases and phosphatases (KPP) for diagnosing, treating and preventing diseases or conditions associated with aberrant KPP expresses; cancer, acquired immunodeficiency syndrome, epilepsy, or infecti

                                                                                                                                                                                                                                                                                          The invention relates to a method for inducing neutralisation of cells or tissues by using a protein binding to CRAM (collapsing response mediator protein-associated molecule) protein or its encoded gene. The proteins and their encoded genes are useful in gene therapy and regenerative medicine, e.g. by inducing neutralisation of mitochondria. They are also applicable in diagnosis, drug development for neural diseases and studying the mechanism of pathosis. The current sequence represents CRAM protein related cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Genes and proteins participating in neutralization of cells or tissues, useful in gene therapy and regeneration medicine, applicable in discousies, drug development for neural diseases and study of mechanism

                                                  The fur gene, encoding furin, is in the human and cat genomes directly upstream of this fes/fps proto-oncogene sequence. Furin is strongly expressed in specific types of tunours and labelled RNA or DNA probes of the fur gene and antibodies against furin can be used for diagnostic purposes. (See also AAN70061-62 and AAP70056). (Updated on 25-MAR-2003 to correct PA field.) (Updated on 27-AUG-2003 to correct OS field.)

Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and a gene therapeutic agent comprising the recombinant vector as an active ingredient. The proteins, genes, agents and methods are useful for preventing and treating, a cartilage disease, e.g. osteosthritis, cartilage defect, or rheumatoid arthritis. The current sequence represents a human gene of the invention encoding a protein that promotent the current sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New purified protein that promotes type II collagen expression, useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo

```
CC environmental pollutant on a cell or living organism. The methods are useful for detecting genes that are up- or down-regulated in canines in a CC disease state. The sequences are useful as diagnostic agents or markers CC disease state. The sequences are useful as diagnostic agents or markers CC to detect a cellular response in a sample individually or as part of a CC gene expression profile. It is also useful as a target for agents that CC modulate gene expression or activity. The database is useful for CC producing electronic Northerns that allow the user to determine the cell CC type or tissue in which a given gene is expressed and to allow the garticular tissue or cell. The methods are useful for gene in a CC garticular tissue or cell. The methods are useful for determining the CC methods are useful for predicting at least one toxic response or the CC methods are useful for predicting at least one toxic response or the CC gathologies such as those of the liver (liver necrosis, fatty liver CC disease, protein adduct formation or hepatitis), those of the kidney, CC heart, brain or testes, or other pathologies associated with at least one of the toxins. The methods are also useful for predicting or elucidating CC compound or test agent due to the similarity of the expression profile compared to the profile induced by a known toxin. The present sequence is that of a canine DNA sequence which was claimed for use during the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                significant portion of the canine genome. The isolated canine nucleic acid sequences of the invention may be useful for drug screening and toxicity assays. The invention is therefore useful for assessing the impact, including toxicity, of a compound, pharmaceutical agent or
                                                         production of a canine microarray of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.
                                                                                                                                                                                                                                                                  infection, viral infection, parasitic infection, protozoal infection, fungal infection and M5 is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; SEQ ID NO 1085; 114pp; English.
